an amount effective to inhibit HIV infection of a CD4+ cell and a pharmaceutically acceptable carrier.--

- 424-1.1
- Sub B'
- A Cont.
- 32. (New) A composition of matter comprising the CD4-gamma2 chimeric heavy chain homodimer of claim 30 and a toxin linked thereto.-- B
- 33. (New) The composition of claim 32, wherein the toxin is the deglycosylated A chain of ricin, domains II or III of Pseudomonas exotoxin A, or Diphtheria toxin.--
- 34. (New) A diagnostic reagent comprising the CD4-gamma2 chimeric heavy chain homodimer of claim 30 and a detectable marker linked thereto.--
- 35. (New) The diagnostic reagent of claim 34 wherein the detectable marker is a radioisotope, chromophore or fluorophore.--
- 36. (New) A CD4-IgG2 chimeric heterotetramer, the heavy chains of which are encoded by the expression vector designated CD4-IgG2HC-pRcCMV (ATCC No. 75193).-- B
- 37. (New) A CD4-IgG2 chimeric heterotetramer, the light chains of which are encoded by the expression vector designated CD4-kLC-pRcCMV (ATCC No. 75194).--
- 38. (New) A CD4-IgG2 chimeric heterotetramer, the heavy and the light chains of which are encoded by the expression vector designated CD4-IgG2HC-pRcCMV (ATCC No. 75193) and the expression vector designated CD4-kLC-pRcCMV (ATCC No. 75194), respectively.--
